Third Spaces of the Anthropocene: Art in-between the Human and Natural Worlds

January 19 – February 17, 2024

The interconnection of the Anthropocene, climate change, and Identities creates a third space, full of binaries and the in-between. These factors result in geographical changes that cause the displacement of people and extinction of flora and fauna. Third Spaces of the Anthropocene explores the complicated relationship between communities and the earth, from regenerative, dismissive, exploitative, thoughtful, fraught, nostalgic and more.
